

Deodorant

All Skin Types

A unisex, aluminum-free deodorant spray formulated with Zinc and eleven essential oils including Vetiver Root and Patchouli to keep you fresh and self-possessed.

How does this product work?

Déodorant has two primary functions: to prevent and neutralise underarm odour. Unlike antiperspirants, the active ingredient in this deodorant, Zinc Ricinoleate, does not inhibit normal perspiration. Instead, it 'fixes' the odours produced by bacterial decomposition in sweat so that they cannot be released into the atmosphere and cause the characteristic sweaty smell.

How do I use Deodorant?

Point the pump at underarms and spray. As pure botanical extracts, including their colour, can transfer to clothing, allow to dry on skin before dressing. We ask that you avoid using Déodorant immediately after underarm shaving.

Zinc Ricinoleate – zinc salt of ricinoleic acid, extracted from the seeds of the castor oil plant.

Vetiver Root Oil – calming, balancing, deodorising

Coriander Seed Oil – anti-microbial
