

Herbal Deodorant Roll-On

All Skin Types

An alcohol-free, roll-on alternative to Herbal Deodorant spray.

How does this product work?

Deodorant has two primary functions: to prevent and neutralise underarm odour. Unlike antiperspirants, the active ingredient in this deodorant, Zinc Ricinoleate, does not inhibit normal perspiration. Instead, it 'fixes' the odours produced by bacterial decomposition in sweat so that they cannot be released into the atmosphere and cause the characteristic sweaty smell.

How do I use Deodorant?

Roll generously under each arm after bathing and allow to dry before dressing.

Zinc Ricinoleate – zinc salt of ricinoleic acid, extracted from the seeds of the castor oil plant.

Sage Leaf – Antifungal, Antibacterial and Antimicrobial properties

Wasabia Japonica – anti-microbial
